ANAEMIA IN PREGNANCY

- Anaemia is also the most common indirect cause of maternal mortality
- Anaemia will worsen the capacity to tolerate blood loss.
- Most common type of anaemia in pregnancy is dimorphic anaemia, that is combination of vitamin B12 and Folic acid and iron deficiency anaemia.
- Vitamin B12 and Folic acid deficiency because of malnutrition and
- Iron deficiency anaemia -microcytic hypochromic anaemia
- Vitamin B12 deficiency causes megaloblastic or macrocytic anaemia
- Most common cause of anaemia is nutritional deficiency or malnutrition
